

Silvaflame-Cleervue Co Ltd

LATHE GUARDS SL6/SL12/SL18

DESCRIPTION

This Cleervue Lathe Guard is made of 2mm Steel with 4mm Polycarbonate visors making it very impact resistant.

The guard easily lifts out of the way allowing for quick and easy access to the chuck.

UNPACKING

Check for shipping damage. If damage has occurred, a claim must be filled with carrier. Check for completeness. Immediately report missing parts to supplier.

Once you have done this please see unpacking instruction for a step-by-step guide on preparing the guard for fitting. 

SAFETY RULES

Warning: for your own safety, read all of the instructions and precautions before operating tool.

Caution: always follow proper operating procedures as defined in this manual - even if you are familiar with use of this or similar tools. Remember that being careless for even a fraction of a second can result in severe personal injury.

ASSEMBLY

The guard will come completely assembled ready to be fitted to your machine.

INSTALLATION

The Lathe Guard fits easily to the saddle of the lathe. You simply place the guard on the back of the saddle to find the best mounting place, mark the two mounting holes with a pen and drill and tap M8. Tighten down with the two M8 bolts.

The guard can be moved forward and up and down using the locking handles to position the guard in the best place to cover the working area.

On the interlocked guards, the interlock needs to be wired into the machine by a trained professional.

Important: Make sure all bolts are nice and tight.

The visors should be replaced every 3 years and should be checked every day before use for signs of cracking or weakening.

Some coolants and cleaners are known to weaken polycarbonate so please check with your supplier before use.

OPERATION

These guards simply lift up to open using the know on the right-hand side, giving access to the work area.

The machine will stop once the guard is opened on the interlocked option.

UNPACKING INSTRUCTIONS

MODELS:

100011/1 - SL6 Traversing

100007/1 - SL12 Traversing

100009/1 - L18 Traversing

1. When you first unpack your traversing guard the adjustment arm is folded flat to the guard on manual models as this is the most effective way to pack the guard without it being damaged in the shipping process.

(interlocked models do differ as the interlock stops the adjustment arm being folded flat but some adjustments are likely to be needed).

2. Loosen the two 10mm bolts on the brackets.

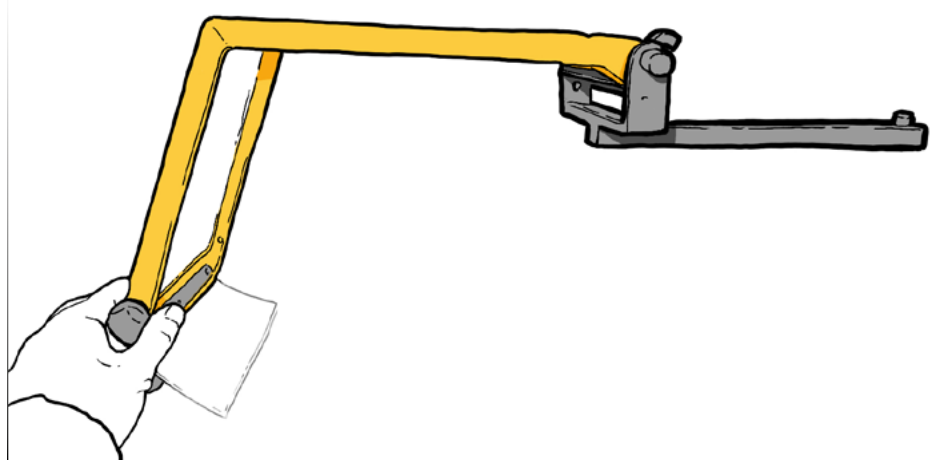

This will let you rotate the adjustment arm to a desired position for your lathe setup.

3. Once in position, retighten the bolts.

The Guard is now ready for your Machine.

Please refer back to installation instructions.
